PHP UNIT

```php
public function testFindFist() : void

{

    /** @var EntityManager $em */

    $em = $this->getApplicationServiceLocator()->get('Doctrine\ORM\EntityManager');

    $postRepository = $em->getRepository(Post::class);

    /** @var Post $post */

    $post = $postRepository->find(1);

    $this->assertNotNull($post);

    $this->assertEquals('Test 1', $post->getName());

}
```
