# REST – CONTROLLER

```php
class RestController extends AbstractRestfulController
{
    /**
     * @var EntityManager
     */
    private $em;
    /**
     * @var ClassMethods
     */
    private $hydrator;

    public function __construct(EntityManager $em, $hydrator)
    {
        $this->em = $em;

        $this->hydrator = $hydrator;

    }
```

# REST – EASY

```php
public function getList()

{

    $jsonModel = new JsonModel();

    $repo = $this->em->getRepository(Post::class);

    $posts = $repo->findAll();

    $data = [];

    /** @var Post $post */

    foreach ($posts as $post) {

        $postEntry = [];

        $postEntry['name'] = $post->getName();

        $postEntry['description'] = $post->getDescription();

        $data[] = $postEntry;

    }

    $jsonModel->setVariable('posts', $data);

    return $jsonModel;

}
```
